Re: Sunday Race Start Procedures

Date: March 28, 2021

---

With the possibility of a wet track for the event on Sunday, the weather conditions may play a role in the type of start for the event.

1/ Standing Start: The race may be started by our usual standing start if weather conditions permit. If the track is wet, we may elect to go with two formation laps behind the safety car to allow drivers to better understand track conditions. After the second formation lap the safety car will return to pit lane and the race cars would continue to their starting position on the front straight and prepare for a standing start.

2/ Single File Rolling Start: If weather and track conditions do not allow for a standing start, we may have the complete field follow the safety car out of pit lane and run laps behind the safety car until we elect to start the race. The race will be started in a single file format once the leader had taken the green light on the front straight.
